

# ZKBioSecurity Mobile Application V2.20.1

## Introduction

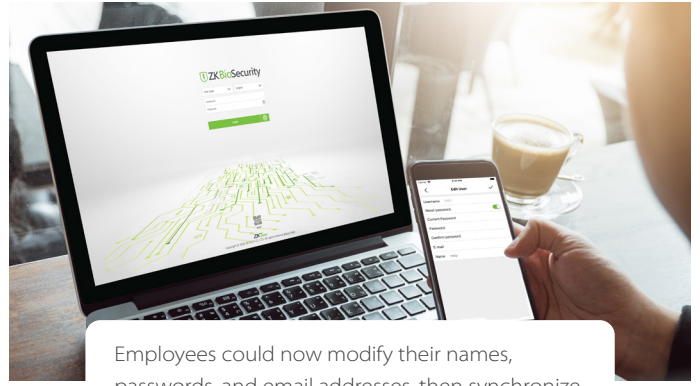

ZKBioSecurity Mobile APP is a mobile client of ZKBioSecurity software. It allows login with two types of user accounts (roles): administrators and employees. When logging in as an administrator, four modules are accessible on the main menu: Personnel, Access, Visitor, and Parking. These modules realize essential functions such as new personnel registration, real-time monitoring, visitor reservation, parking spaces application review and approval, etc. When logging in as an employee, there would be three accessible functions: attendance & calendar, attendance statistics, and mobile credential. Employees can record their own time and attendance with the app and realize contactless check-in.

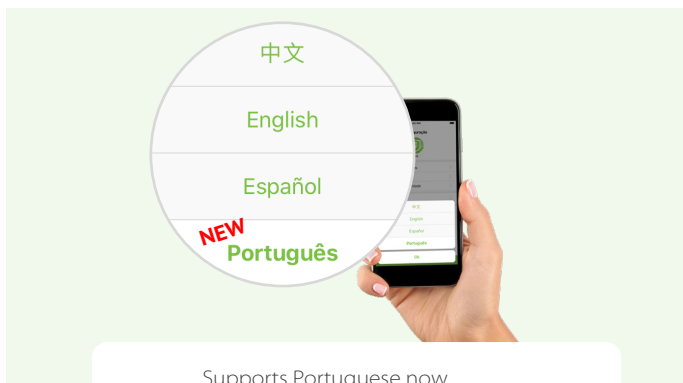

## What's new?

Allows personnel to use a dynamic QR code as the Mobile Credential when logging in as an employee and requesting for access, realizing more convenient and contactless verification.

Employees could now modify their names, passwords, and email addresses, then synchronize them with the software's personnel module.

Supports Portuguese now.

Works on both Android & iOS.

APP Version	V2.20.1
Software Version	ZKBioSecurity 4.0.0 or above
